

Adjustable Pipe Lifter 400mm

Two of the key priorities on gas and water pipe laying sites are safety and productivity. The Adjustable Pipe Lifter 400mm is a simple, robust and effective device that provides significant benefits in both of these areas.

Working in conjunction with pipe support rollers, the adjustable Pipe Lifter 400 uses a simple lever mechanism to assist with the ejection and movement of polyethylene pipe up to 400mm in diameter. A large footprint frame allows for operation on soft ground. The Pipe Lifter's metal rollers incorporate bearings which ensure a free rolling action for the pipe and with a carry handle allows a site team to move quickly, safely and smoothly on to the next joint.

FEATURES

- Pipe size range up to 400mm
- Fully adjustable lifting range and all steel construction
- Compact design
- Folds flat for storage and transportation

Code	Description
07-01-200	400mm Ø pipe lifter
